

Is Apostille Texas's website encrypted and secure?

Yes, apostilletexas.org has SSL website encryption for your protection while you visit our website and send us email messages.

Most of our international apostille competitors sadly do not have SSL encryption on their websites and you should be extremely leery of any company or website that is either too cheap or too dumb (or both) who are not willing to protect their website visitors and customers' privacy and security.

To see if any website you visit on the internet has SSL security, just look at the website browser URL area on your phone, tablet, or computer. If you see a little padlock icon in front of the https://www. It has SSL encryption; if it doesn't, you'll see instead a little triangle, then the words "Not Secure."
